

Acknowledgements

This report is the product of many efforts, contributions and expertise within and beyond Washington County.

Starting at home, project staff would like to thank the Advisory Committee for their time, enthusiasm and innovation. In particular, the contribution of private sector members Roger Holst (PCT Communications), Steve Buza and Nelson Geel (Axiom Technologies, LLC), Barbara Launer (SuprTEK) and Bill Barnett (CCP Wireless) were invaluable.

The City of Eastport sponsored the Community Development Block Grant Planning Grant that initially funded the study, in cooperation with the City of Calais and the Town of Machias. Eastport Downtown Director Lora Whelan and numerous volunteer supporters of Eastport for Pride brought their unquenchable support to initial funding efforts. They maintain an essential focus on this critical effort to ensure that 21st Century technology is part of the basic infrastructure of Washington County.

The Local Emergency Planning Committee of Washington County and the Washington County Communications Committee brought important insights to the project. The collaboration between economic development and public safety concerns offers the greatest promise for improving telecommunications infrastructure in Washington County.

Additional financial support through a Rural Community Development Initiative grant from the United States Department of Agriculture allowed the study to extend county-wide beyond the three service centers of Eastport, Calais and Machias. Funds and in-kind support were also generously provided by the Eastern Maine Development Corporation, the Sunrise County Economic Council and the private sector. We also thank the members of the private sector who offered candid responses to our interview questions.

Interviews and requests for information were provided by several staff members of the Maine Public Utilities Commission, Lieutenant Ray Bessette of the State Police Department, Chief Information Officer Richard Thompson and his Administrative Assistant Judy Beloff, and Steve Ward, Office of the Public Advocate. We sincerely appreciate their time and timely input in a field that is rapidly evolving.

Improvements in telecommunications infrastructure were constructed and conceived during the course of the study. We attempted to capture the state of cellular telephone and high speed internet access in Washington County with the intention of documenting the need and demand for its improvement. If we misrepresented the state of that infrastructure the responsibility lies with the authors and not with those acknowledged above. Given our stated objective however, we would be delighted to discover that innovations are making this report out of date before it is printed.
